About me

Tech Lead / Full-Stack Developer with 7+ years of experience building and modernizing systems in the finance and clinical research industries. I specialize in designing maintainable solutions to complex problems and helping teams deliver reliably through clear communication and strong technical foundations.

I work primarily with C# and the .NET platform and have spent most of my career improving legacy systems, evolving architectures, and optimizing development processes across the stack.

Beyond hands-on development, I've led projects and focused heavily on non-coding work that makes teams effective: onboarding, documentation, and process improvements. I enjoy simplifying complexity, both in code and in how teams work.

Skills

Programming Languages	C#, JavaScript, TypeScript, SQL, PowerShell
Frameworks & Libraries	.NET, React, jQuery, Knockout.js, E2E testing (Playwright, Selenium, Puppeteer)
Cloud & DevOps	Azure, Azure DevOps, Docker, CI/CD, YAML, Terraform
Tools & Methodologies	Agentic coding (Claude Code, GitHub Copilot), Git, API Design (REST), Scrum, SAFe, BDD

Experience

🏢 Viedoc Technologies

TECH LEAD

SENIOR SYSTEM DEVELOPER

Uppsala, Sweden

Jun 2024 - Present

Sep 2022 - Jun 2024

- After less than 2 years at Viedoc, I was promoted to Tech Lead for Team Phoenix, one of Viedoc's development teams. Leading a newly formed team of developers and testers across Sweden and Vietnam has been a challenge, but measured by eNPS and sprint velocity we're now the happiest and most productive team at Viedoc, something I'm very proud of.
- When I first started in 2022, I initially worked on rewriting an old application and addressing technical debt in several systems, primarily in the big .NET monolith that contains the majority of the code for the Viedoc Suite. A significant part of this effort was spent breaking this down into smaller, more manageable, and separate units that could be maintained by independent teams.
- I've also spent a lot of time improving the overall developer experience at Viedoc, significantly reducing the onboarding time and how long it takes to get up-to-speed with new systems. This includes adding content and structure to the internal Wiki and READMEs, updating and streamlining the process for new developers, improving code structure, adding setup scripts for repetitive tasks (mostly using PowerShell), and more. Another part of this DevEx journey was optimizing several complex CI/CD pipelines, which in one instance resulted in saving approximately 80 hours per week in execution time.

🏢 Skandia

FULL-STACK WEB DEVELOPER

Stockholm, Sweden

Feb 2020 - Sep 2022

- Co-led a project to modernize two of my team's core applications, which included migrating the frontend from ASP.NET Framework to React and moving from .NET Framework to .NET 6. During this project we successfully utilized the *strangler fig*/strangler pattern to incrementally port parts of the system to the new platform without having to do a *big bang* release. This dramatically reduced the risks involved with a project like this and allowed us to work on multiple things at the same time, continuously delivering customer value while working on the rewrite.
- After working almost purely with backend tasks at Santander, this role also allowed me to sharpen my frontend skills like React, TypeScript, JavaScript, jQuery, HTML, and CSS.

🏢 Santander Consumer Bank

BACKEND WEB DEVELOPER

Stockholm, Sweden

Aug 2018 - Feb 2020

- Contributed to a complete overhaul of the private loan application process using .NET Core, WebSockets, and React.
- Shortly after starting this project, a major reorganization resulted in many people leaving, including the lead developer on my team. At that point I stepped up and became the *de facto* team lead, and for the next ~9 months I worked hard to make sure we could still finish the project as planned. The new and improved loan process was released to production shortly after I left Santander in February 2020.

Education

Master of Social Science in Information Systems

DEPARTMENT OF INFORMATICS AND MEDIA, UPPSALA UNIVERSITY

Uppsala, Sweden

Sep 2016 - Jun 2018

- Agile Methods, Software Engineering.
- Completed my master's thesis titled "A comprehensive summary and categorization of physical quantity libraries".

Bachelor of Social Science in Information Systems

DEPARTMENT OF INFORMATICS AND MEDIA, UPPSALA UNIVERSITY

Uppsala, Sweden

Sep 2013 - Jun 2016

- Algorithms and Data Structures, Information Infrastructure, Object Oriented Programming I & II.

Courses

Monterro's "Top Talent" leadership program

Stockholm, Sweden

Mar 2024 - Nov 2024

Every year, Monterro, who are the majority owners of Viedoc, organizes a 10-month leadership program. Each portfolio company gets to nominate one person to attend this course, and in 2024 I was chosen. The program includes several in-person workshops, personality tests, a project, and mentorship from people within Monterro's network. This is how Monterro themselves describe this program:

"[...] a tailored, 10-month mentorship program designed for emerging leaders. Participants are supported by senior executives to help them develop new perspectives and build new skill sets."

Publications

Unit of measurement libraries, their popularity and suitability

SOFTWARE: PRACTICE AND EXPERIENCE

Nov 2020

- This article was a further continuation of the theme that stemmed from my master's thesis.

Quantity Checking through Unit of Measurement Libraries, Current Status and Future Directions

Prague, Czech Republic

MODELSWARD

Feb 2019

- This was a continuation of the work put forth by my supervisor (Steve McKeever) and I in the article "The Next 700 Unit of Measurement Checkers" which was originally based on the work I did for my master's thesis.

The Next 700 Unit of Measurement Checkers

Boston, MA, USA

ASSOCIATION FOR COMPUTING MACHINERY

Nov 2018

- This article was the end result of my master's thesis work during the spring of 2018. Presented at the proceedings of the 11th ACM SIGPLAN International Conference on Software Language Engineering in Boston (SLE 2018).
